

Glycolic (Kojic / Hydroquinone)

ACTIVE INGREDIENT - Glycolic Acid, Kojic Acid, Hydroquinone

- Kojic / Glycolic / Hydroquinone Peel is a targeted depigmentation chemical peel designed to treat stubborn hyperpigmentation, melasma, tanning, and uneven skin tone.
 - This powerful combination works through multi-level correction:
 - Glycolic Acid accelerates exfoliation and enhances penetration
 - Kojic Acid inhibits melanin production
 - Hydroquinone reduces excess pigmentation at the source
 - Together, they help visibly lighten dark spots, improve skin clarity, and restore a more even complexion
- This peel should be performed under professional supervision due to its corrective strength

INDICATIONS

- Melasma
- Hyper Pigmentation
- Dark Spots
- Uneven Skin Tone
- Tanning
- PIH
