

Lactic 70% Mix Peel

ACTIVE INGREDIENT - Lactic Acid 70%

- Lactic Cocktail Peel 70% is a high-concentration Alpha Hydroxy Acid (AHA) peel formulated for intensive exfoliation combined with hydration support. Lactic acid, known for its gentle yet effective action, promotes controlled epidermal renewal while maintaining skin moisture balance.
- Despite its high percentage, lactic acid is one of the milder AHAs, making this peel suitable for pigmentation, dullness, uneven tone, and dehydrated skin — when administered under professional supervision.

INDICATION

- Dry Dehydrated Skin
- Dullness
- Uneven Tone
- Glow Boost
- Mild Pigmentation
- Fine Lines
