

Salicylic 20% Mandelic 10%

ACTIVE INGREDIENT - Salicylic 20% Mandelic 10%

- Salicylic 20% Peel is a medium-strength Beta Hydroxy Acid (BHA) chemical peel specially formulated for oily, acne-prone, and congested skin. Being oil-soluble, salicylic acid penetrates deep into the pores, dissolves excess sebum, and helps reduce inflammation.
- This concentration is ideal for patients with moderate acne, blackheads, whiteheads, and post-acne pigmentation, offering effective exfoliation with controlled downtime.
- Mandelic 10% Peel is a mild Alpha Hydroxy Acid (AHA) peel derived from bitter almonds. Due to its larger molecular size, mandelic acid penetrates the skin more slowly, making it gentle and well-tolerated — especially for sensitive and darker skin types.
- This peel is ideal for beginners, sensitive skin, mild acne, and early pigmentation concerns, offering gradual exfoliation with minimal irritation and downtime.

INDICATION

- Active Acne
- Oily Skin
- Blackheads
- Acne Scars
- Open Pores
- Sensitive Skin
- Rosacea - Prone
- Mild Pigmentation
- Dullness
- Anti - Aging
